

ISHU KUMAR

Senior Software Engineer | AI Engineer

Ghaziabad, India (open to remote and global relocation) | ishu.kumars@gmail.com | +91-8574964548
linkedin.com/in/ishukumars | github.com/Ishuin | zocept.com

Python engineer, seven years, building AI-native systems end to end: MCP servers and clients, RAG pipelines, and multi-agent orchestration with verification loops. Led the open-source MCP implementation for the Oracle AI Optimizer (github.com/oracle/ai-optimizer). Migrated a 1M+ user e-commerce platform from PHP to Python as Technical Lead. Build and operate Zocept (zocept.com), a live, revenue-generating AI product with 516 CI-counted automated tests. Looking for senior AI engineering or forward-deployed roles.

EXPERIENCE

ImpplyCloud | Technical Lead

Oct 2025 – Mar 2026

- Led the migration of a multi-tenant e-commerce SaaS from PHP to Python on Azure using event-driven serverless patterns: about 15 services, 1M+ end users, 4 tenants (one fully customized), on a multi-database architecture (MySQL and PostgreSQL); downtime incidents down 40%.
- Redesigned the full user-module backend (points, rewards, tiers, groups) with asynchronous execution.
- Set observability standards with Grafana Loki across distributed microservices; incident response time down 25%.
- Mentored a squad of 6 engineers on Python practices, system design, and secure coding.

Oracle India | Senior Software Developer

May 2025 – Oct 2025

- Led the MCP implementation for the Oracle AI Optimizer (open source, github.com/oracle/ai-optimizer): wrote a vector-search MCP server and exposed the Optimizer as both MCP server and MCP client; MCP now ships in the toolkit.
- Built RAG pipelines on Oracle AI Vector Search; authored the Vector Store integration guide and test coverage for chat and model pages.

CloudBolt Software | Senior Software Engineer

Dec 2021 – Mar 2025

- Owned AWS and Azure integrations for the CloudBolt cloud management platform: EC2, EKS, ECS, Lambda, IAM, and VPC on AWS; compute, container services, Blob Storage, and Key Vault on Azure. Python, Django, DRF, PostgreSQL, with 80%+ test coverage on owned modules.
- Implemented AWS Organizations and Azure subscription infrastructure support with multi-threaded sync of accounts, regions, and resources; built data collectors for AWS, Azure, and OpenStack instances.
- Tracked down sources of excess cloud billing and proposed automated stale-resource detection, saving \$3,000 per month on one account.
- Designed infrastructure as code (Terraform, CloudFormation) and CI/CD pipelines (Jenkins, GitLab) across AWS, Azure, GCP, VMware, and OpenStack.

Deloitte | Analyst

Apr 2021 – Nov 2021

- Automated about half of the team's manual infrastructure tasks with Python and VB scripts, cutting processing time for those workflows by 90%.
- Reduced large-scale analytics runtime by 40% using PySpark on Amazon Redshift.

Earlier

- Root Info Solutions, Associate Software Engineer (Sep 2020 – Apr 2021): built the real-time WebSocket layer (Django Channels) for the JUST multi-service ecosystem, scaling live data sync for 50,000+ users.
- Skysoft IT Services, Software Developer (Oct 2019 – Sep 2020): internal tools and Python backend components.

SELECTED AI & PRODUCT WORK (SELF-DIRECTED)

Zocept, AI credit-card rewards optimizer

live at zocept.com

- Built and operate solo, live and revenue-generating: 213 credit cards covered across major Indian banks, payments on Razorpay with recurring paid subscriptions, full auth (Google OAuth PKCE), transactional email, deployed on Vercel.
- 516 automated tests (358 Playwright end-to-end, 158 Vitest unit) counted in CI on every deploy; production Lighthouse 90/100/100/100 (desktop).
- Test suite built with coding agents (Claude Code, Kimi Code, OpenCode) running as a separate track from feature work.

VaultMind, privacy-first AI knowledge product

working MVP

- Local-first RAG over personal data (chat exports, bookmarks, email) on LanceDB with local models (Ollama); runs with internet access switched off entirely.
- Current hardening work: golden-dataset retrieval evals, role-based access control, agent-level observability.

OPEN SOURCE

- oracle/ai-optimizer: MCP implementation and Vector Store integration guide (public PR history).
- MCP_ChatBot (github.com/Ishuin/MCP_ChatBot): multi-provider MCP client bridging one chat loop to eight LLM providers with per-provider tool-schema translation.
- Docs contributions merged in django-rest-framework and pytest-django.

SKILLS

Programming: Python (7 years), JavaScript, PHP, Shell, Bash, PowerShell

AI engineering: MCP server and client design, RAG, multi-agent orchestration, verification loops, evals, prompt and context design

AI tooling: Claude Code, Kimi Code, OpenCode, Cursor, Windsurf, LiteLLM, LangChain, LangGraph, Ollama, NVIDIA NIM, Anthropic, OpenAI, and Gemini APIs, HuggingFace, LangFlow, n8n

Cloud & DevOps: AWS, Azure, GCP, Kubernetes, Docker, Linux (RHEL, Debian), Terraform, CloudFormation, OpenStack, VMware, Vercel, CI/CD

Data & frameworks: PostgreSQL, MySQL, Redis, SQLite, Redshift, Supabase, LanceDB, Pinecone, PySpark, Django, DRF, FastAPI, React, pytest, Playwright

EDUCATION

M.Tech, Computer Science and Engineering, Central University of Rajasthan 2017 – 2019, CGPA 7.75/10

B.Tech, Civil Engineering, Rajkiya Engineering College, Bijnor 2011 – 2015

CERTIFICATIONS

AI Agents and Agentic AI with Python and Generative AI • MCP: Build Rich-Context AI Apps with Anthropic • AWS Serverless • CloudBolt Certified CMP Engineer • OWASP Top 10:2021 in Python
